Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Excerpt from The Study of Stellar Evolution, Vol. 10: An Account of Some Recent Methods of Astrophysical Research As first planned, this book was intended to serve as a handbook to the Yerkes Observatory. Many inquiries regarding the observatory s work, made by the numerous visitors received there annually, seemed to call for a printed explanation of the purposes in view and the observational methods employed. Removal to California and new duties connected with the organization of the Mount Wilson Solar Observatory caused a modification of the project. I finally adopted the plan of describing a connected series of investigations, laying special stress on the observational methods employed, in the hope of explaining clearly how the problem of stellar evolution is studied. The advantage of using concrete illustrations drawn, in large part, from personal experience, and the desire that the book should be of special service to visitors at the Yerkes and Mount Wilson Observatories, are sufficient reasons, I trust, for the otherwise undue proportion of space devoted to these institutions. The omission of such important subjects as the theories of temporary and variable stars: Sir George Darwin s discussions of evolution as affected by tidal friction; Vogel s and Pickering s photometric and spectroscopic studies, and the researches of the latter on the distribution of stars of various types; Campbell s investigations of stellar spectra, and, to mention no other work, his development of the spectro-graphic method of determining radial velocities, sufficiently indicate that I have made no attempt to deal with the general problem of stellar evolution, or to offer anything approaching an adequate description of the observational methods of astrophysics.
